Product

Mirror polished stainless steel fire panel screen

Overview

Due to the stature of this building a normal fire alarm panel casement was not acceptable for the client so Nationwide Door Systems supplied these bespoke mirror framed pair of fire panels doors complete with surround frame to house the fire alarm panel making the lobby area seamless and ecstatically pleasing.

Technical Information

The mirror polished frame and doors are manufactured from 3mm thick mirror polished 304 stainless steel mechanically fixed into position, the doors operate on two full height continuous stainless steel hinges. A tremendous amount of care was taken over the manufacture and installation of this project as mirror polished stainless steel needs to be handled with the softest touch to avoid marking or warping.
